

## *The exception in the HRTInvoker::inProcessLaunch() function results in synthesis failure*

*Hello,*

*I encountered a crash while using Vivado for synthesis on my Linux system. The version of Vivado I am using is 2023.2. I performed the following commands in the Ubuntu terminal:*

```
vivado -mode tcl
```

```
read_verilog rtl.v
```

```
synth_design -top top
```

*During the synthesis process, Vivado crashed and generated a log file containing information about the crash.*

```
Abnormal program termination (11)  
Please check '/home/user/vivada_project/hs_err_pid845827.log' for details  
segfault in /home/user/software/vivado_2023.2/vivado2302/Vivado/2023.2/bin/unwra  
pped/linux64.o/vivado -exec vivado -mode tcl, exiting...
```

*I have attached our design file rtl.v and the log file from Vivado's output.*

*I am looking forward to your response.*

*Thank you!*
